Signs Layout and Interface

Signs Extension

The following illustrates the layout of the Signs extension and the Signs client in Appspace.

Application Library

The Application Library is the default landing page when you access the Signs extension. You can create a new application, or view a list of all created applications. You can also view details such as the last update date/time, resolution of the application, the number of layouts and widgets in the application, target device details, and the content size. You can also import, export, or copy an application, and view a summary of the number of applications and target device types.

When you click on an application, the application’s edit window is displayed with tabs such as Overview, Edit, Actions, Schedule, Preview, Players, Settings, Permissions, and Properties.
**Overview Tab**

The Overview page displays a preview of the application, and displays last update dates of the application. You can turn Automatic Syncing on or off, and also choose to allow or disable public access to the application.

If public access is enabled, the public URL for the application is displayed.
When public access is enabled, the Email tab and the Embed tab are displayed as well. The Email tab allows you to include email addresses (comma separated for multiple addresses) along with an optional message, to notify your contacts about the application.

The Embed tab gives you the option to copy a HTML snippet of the application preview window to embed into an existing HTML page or website.
Edit Tab

The Edit page displays all the layouts built in an application. When you select a layout, you can view and edit the layout framework, configure the properties of the layout and its associated widgets via the Visual Editor, and set the layout's playout duration.
Actions Tab

The Actions page allows you to create a new event action and displays a list of event actions added to this application. For each event action listed, you can view details such as type, target, method, and event parameters. You can also choose to edit or delete an event action here.

Schedule Tab

The Schedule tab is displayed only if Layout Scheduling is enabled in an application. The Schedule page displays the schedules and the time or duration for the current day. You may choose to view the schedules for another day via the Date Picker.

Preview Tab

The Preview page allows you to preview the application for a selected layout. You can choose to preview the application on selected players and at selected times.
Players Tab

The Players page displays a list of devices that are currently assigned to the application. It also displays the IP address, tags, sync status of the player, version, and a status summary of the number of players that are online, offline, or have lost communication.

<table>
<thead>
<tr>
<th>Last Updated</th>
<th>Name</th>
<th>Tags</th>
<th>Application</th>
<th>IP Address</th>
<th>Status</th>
<th>Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>October 2014</td>
<td>THE Video Wall</td>
<td>THE</td>
<td>Ambient Test App</td>
<td>172.18.20.240</td>
<td>Out Of Sync</td>
<td></td>
</tr>
<tr>
<td>October 2014</td>
<td>THE PC Player</td>
<td></td>
<td>Ambient Test App</td>
<td>172.18.20.244</td>
<td>Offline</td>
<td></td>
</tr>
</tbody>
</table>

Settings Tab

The Settings page displays all application settings. You can make changes to the application’s settings such as name, target device, resolution, public access, and layout scheduling, or choose to delete the app.
Permissions Tab

The Permissions page allows you to configure permissions for the application.

Properties Tab

The Properties page displays a list of custom properties that can be added to the application.
<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>application_option.datasource.cache</td>
<td>false</td>
</tr>
<tr>
